

Group: Lsd

GROUP: Example Models

GROUP: Work in Progress

Description

Example Models

This is the example models for the Lsd system. They are hierarchically organised. If you double-click on GROUP:Example Files, you are brought to a lower level in the hierarchy. Double-click on one of the groups to move down in the hierarchy. When you have found the model you want, double-click it to open it in LMM. Double-click on the <UP> indicator at the bottom of the list to move up in the hierarchy.

You will find a list of the different types of models that are available as example.

Note that some of the models are written in pure C++ code (older models) while others adopt the new Lsd macro language.

See the Lsd Documentation in the LMM help menu.
